## PYJAMA CATSHARK

Streephaai

*Poroderma africanum*

Max length: 97 cm

IUCN status: Least concern

Endemic to Africa

**save our seas**  
shark education centre

This shark is one of the 13 most common species found in False Bay, South Africa. The International Union for Conservation of Nature's (IUCN) Red List of Threatened Species ([www.iucnredlist.org](http://www.iucnredlist.org)) indicates the global conservation status of a species.

In this colouring series, species are listed as having either a wide distribution or being endemic to Africa (which means the species is only found there).
