

# SHARKS OF FALSE BAY: 1. WHITE SHARK

## WHITE SHARK

Grootwithaai

*Carcharodon carcharias*

Max length: 600 cm

IUCN status: **Vulnerable**

Wide distribution

This shark is one of the 13 most common species found in False Bay, South Africa. The International Union for Conservation of Nature's (IUCN) Red List of Threatened Species ([www.iucnredlist.org](http://www.iucnredlist.org)) indicates the global conservation status of a species. In this colouring series, species are listed as having either a wide distribution or being endemic to Africa (which means the species is only found there).
